

System requirements

1. When the user enters the page, you should arouse the user's curiosity to take the test.
2. CT wants to divide users into 3 areas: Graphical design, programming & SoMe.
3. They also want to gather information on how much each user fits into each of the categories.
4. Store and gather the information in a database for future target marketing, where CT can look up all customers, who have an interest in for instance "Graphical design" and how big of a percentage compared to the two other categories.
